Assignment No :- 2b

Code:-

```
unamea3-402-10@a3-402-10:~$ uname -a
Linux a3-402-10 5.15.0-91-generic #101~20.04.1-Ubuntu SMP Thu Nov 16 14:30:18 UTC 2023 x86_64
x86_64 x86_64 GNU/Linux
a3-402-10@a3-402-10:~$
apt-get apt 2.0.9 (amd64)
Usage: apt-get [options] command
        apt-get [options] install|remove pkg1 [pkg2 ...]
        apt-get [options] source pkg1 [pkg2 ...]
apt-get is a command line interface for retrieval of packages
and information about them from authenticated sources and for
installation, upgrade and removal of packages together with
their dependencies.
Most used commands:
  update - Retrieve new lists of packages
  upgrade - Perform an upgrade
  install - Install new packages (pkg is libc6 not libc6.deb)
  reinstall - Reinstall packages (pkg is libc6 not libc6.deb)
  remove - Remove packages
  purge - Remove packages and config files
  autoremove - Remove automatically all unused packages
  dist-upgrade - Distribution upgrade, see apt-get(8)
  dselect-upgrade - Follow dselect selections
  build-dep - Configure build-dependencies for source packages
  satisfy - Satisfy dependency strings
  clean - Erase downloaded archive files
  autoclean - Erase old downloaded archive files
  check - Verify that there are no broken dependencies source
  - Download source archives
  download - Download the binary package into the current directory
changelog - Download and display the changelog for the given package See
apt-get(8) for more information about the available commands.
Configuration options and syntax is detailed in apt.conf(5).
Information about how to configure sources can be found in sources.list(5).
Package and version choices can be expressed via apt_preferences(5).
Security details are available in apt-secure(8).
                                        This APT has Super Cow
Powers. a3-402-10@a3-402-10:~$ sudo apt-get update
[sudo] password for a3-402-10:
a3-402-10@a3-402-10:~$ sudo docker run hello-world
Unable to find image 'hello-world:latest' locally
latest: Pulling from library/hello-world
c1ec31eb5944: Pull complete
Digest: sha256:4bd78111b6914a99dbc560e6a20eab57ff6655aea4a80c50b0c5491968cbc2e6 Status:
Downloaded newer image for hello-world:latest
Hello from Docker!
This message shows that your installation appears to be working correctly. To
generate this message, Docker took the following steps:
 1.  The Docker client contacted the Docker daemon.
 2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
    (amd64)
 3. The Docker daemon created a new container from that image which runs the
    executable that produces the output you are currently reading.
 4. The Docker daemon streamed that output to the Docker client, which sent it to
    your terminal.
To try something more ambitious, you can run an Ubuntu container with:
 $ docker run -it ubuntu bash
Share images, automate workflows, and more with a free Docker ID:
